

EER Updates:

We incorporate the feedback received from Phase 1 and made the following changes to our EER grade

- (1) We remove surrogate key for Swap_Record and VideoPlatform (ItemID is kept as this variable is mentioned in the instruction file)
- (2) We remove the link between Swap_Record and User since we can indirectly infer the relationship via Item
- (3) We separate Nick_Name attribute from Name composite attribute
- (4) We remove Game_Type attribute from Item since this can be inference from subtype tables
